SUMMARY

Data scientist with a background in bioinformatics and biostatistics. Four years building data pipelines and statistical models on sequencing and proteomics data, 3 peer-reviewed papers, and a Master in Data Science & AI. I now work on machine learning, analytics and LLM applications for business and life sciences.

EXPERIENCE

Writer, Bioinformatics Expert (contractor) | Mercor, Remote **10/2026 – Present**
- Write expert-level bioinformatics problems with worked solutions to train and evaluate AI models.

Bioinformatics Researcher | CBM Severo Ochoa (CSIC–UAM), Madrid **09/2022 – 07/2025**
- Built Python, R and Bash pipelines to process terabytes of Ribo-Seq, RNA-seq and proteomics data, replacing manual processing.
- Ran the statistical analysis behind 3 peer-reviewed papers (2 as first author) on genome annotation and proteogenomics.
- Main data contact for the group: presented results to PIs and lab teams, and supervised 5 students and technicians.

Online Data Analyst (part-time) | Telus International AI, Remote **03/2025 – 06/2025**
- Rated search engine and AI model outputs against detailed quality guidelines to improve model accuracy.

Biotech Researcher | Universität Konstanz, Germany **04/2020 – 01/2022**
- Ran a transcriptomics project end to end, including de novo assembly on HPC clusters, and supervised 3 BSc/MSc students.

Science & English Tutor | Private academy and freelance, Madrid **2018 – 2020**

PROJECTS

Retail Demand Forecasting | Master's capstone, Nuclio Digital School **2025**
- Forecast weekly demand for 30K item-store series (6.7M rows) with Lasso and XGBoost, beating a naive baseline by **10% (RMSE)** and **13% (WMAPE)** on a held-out test set.
- Segmented products with K-Means and built a Power BI dashboard of forecasts by region, department and segment.

Clinical Trial Dashboard (R Shiny) | Personal project, live demo
- Interactive dashboard for a simulated 500-patient, three-arm trial: filters, KPI boxes and plotly charts of biomarker response.

Sextant IA: LLM travel planner | Personal project, sextantia.eu
- Multi-step LLM pipeline that builds personalised itineraries, generating each day in parallel. Django on Oracle Cloud with CI/CD (GitHub Actions).

EDUCATION

Master in Data Science & AI | Nuclio Digital School **2025**
MSc in Bioinformatics and Biostatistics | UOC–UB **2019 – 2022**
MSc in Microbiology | Universidad Autónoma de Madrid **2018**
BSc in Biology | Universidad de Salamanca **2017**

SKILLS

ML & AI	scikit-learn, XGBoost, PyTorch, TensorFlow/Keras, forecasting, clustering, LLM APIs, prompt engineering
Bioinformatics	NGS (RNA-seq, Ribo-Seq, WGS), differential expression (DESeq2), genome assembly and annotation, proteogenomics, HPC
Data & BI	Python (pandas, NumPy), R, SQL, Bash, Git, Docker, Power BI, Tableau, R Shiny
Cloud & DevOps	Oracle Cloud, Nginx, GitHub Actions (CI/CD), Linux servers, AWS (basic)
Statistics	Hypothesis testing, Bayesian statistics, experimental design
Certifications	ICH Good Clinical Practice E6 (R3), The Global Health Network
Languages	Spanish (native), English (C1), German (B1), French (A2)
